GHD Digital

GHD Automated Report Creator (ARC)

↳ Cloud–based, digital reporting made easy
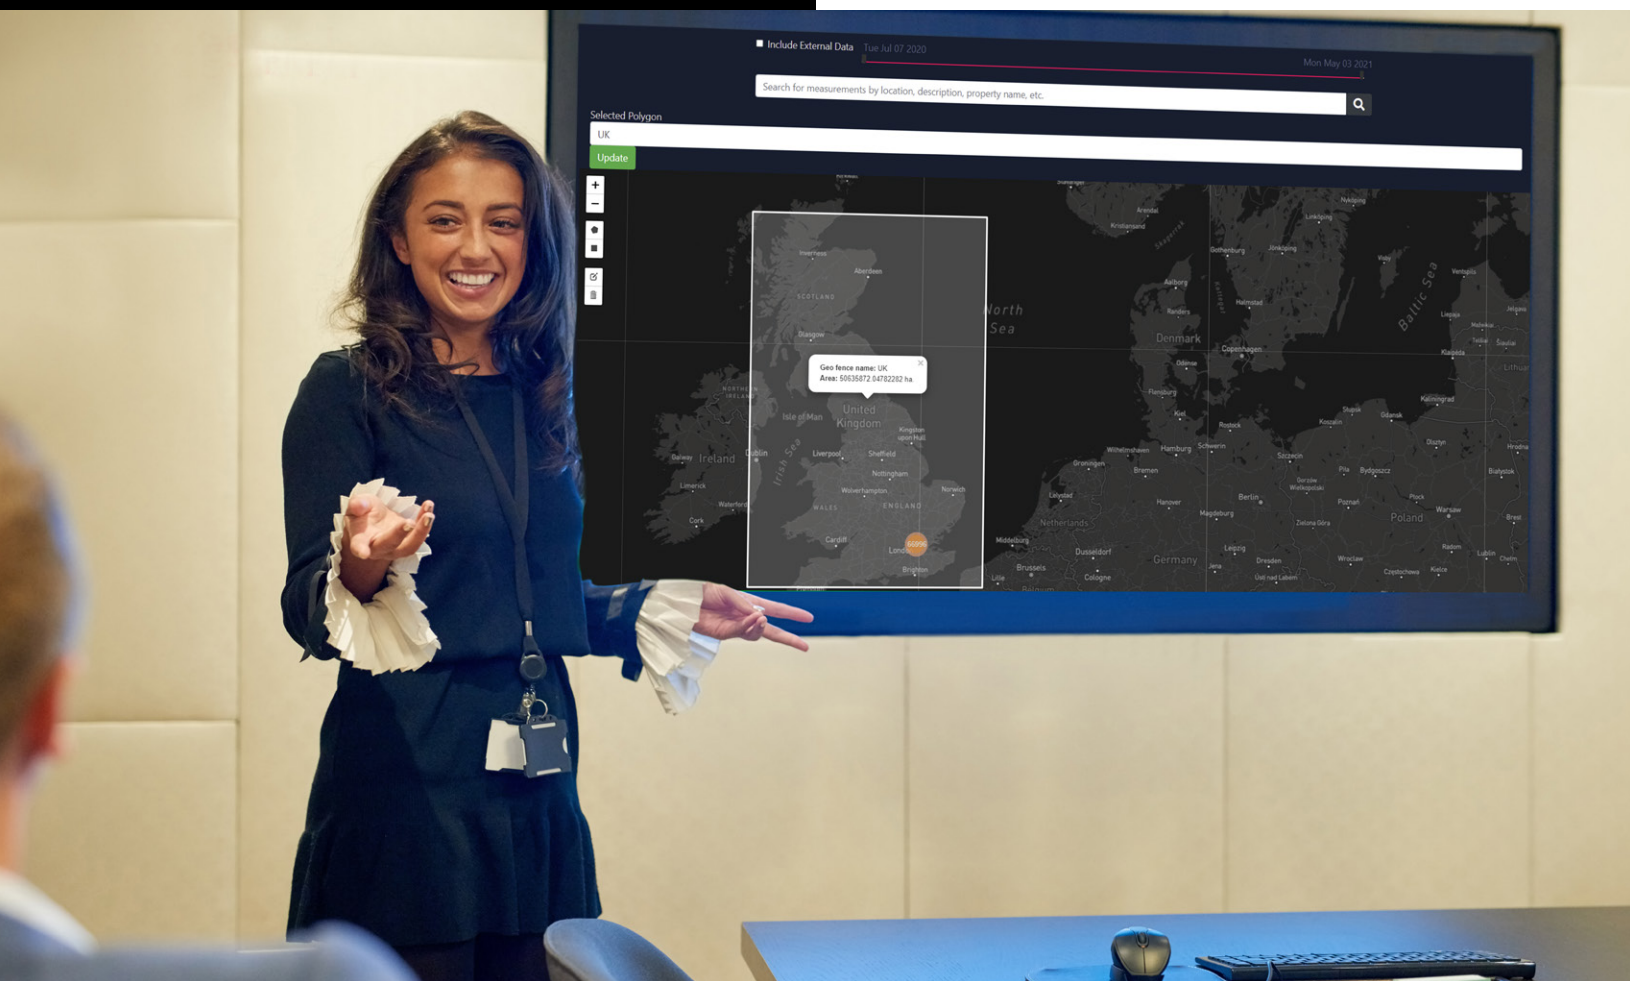

→ **The Power of Commitment**

Fully automated, cloud-based digital reporting

Reporting can be expensive and time consuming

Many organizations have established reporting departments that support regulatory compliance, project controls, auditing, and many other functions. However, it can take weeks to produce the required reports, increasing business overheads and exposing operations to potential risk due to error.
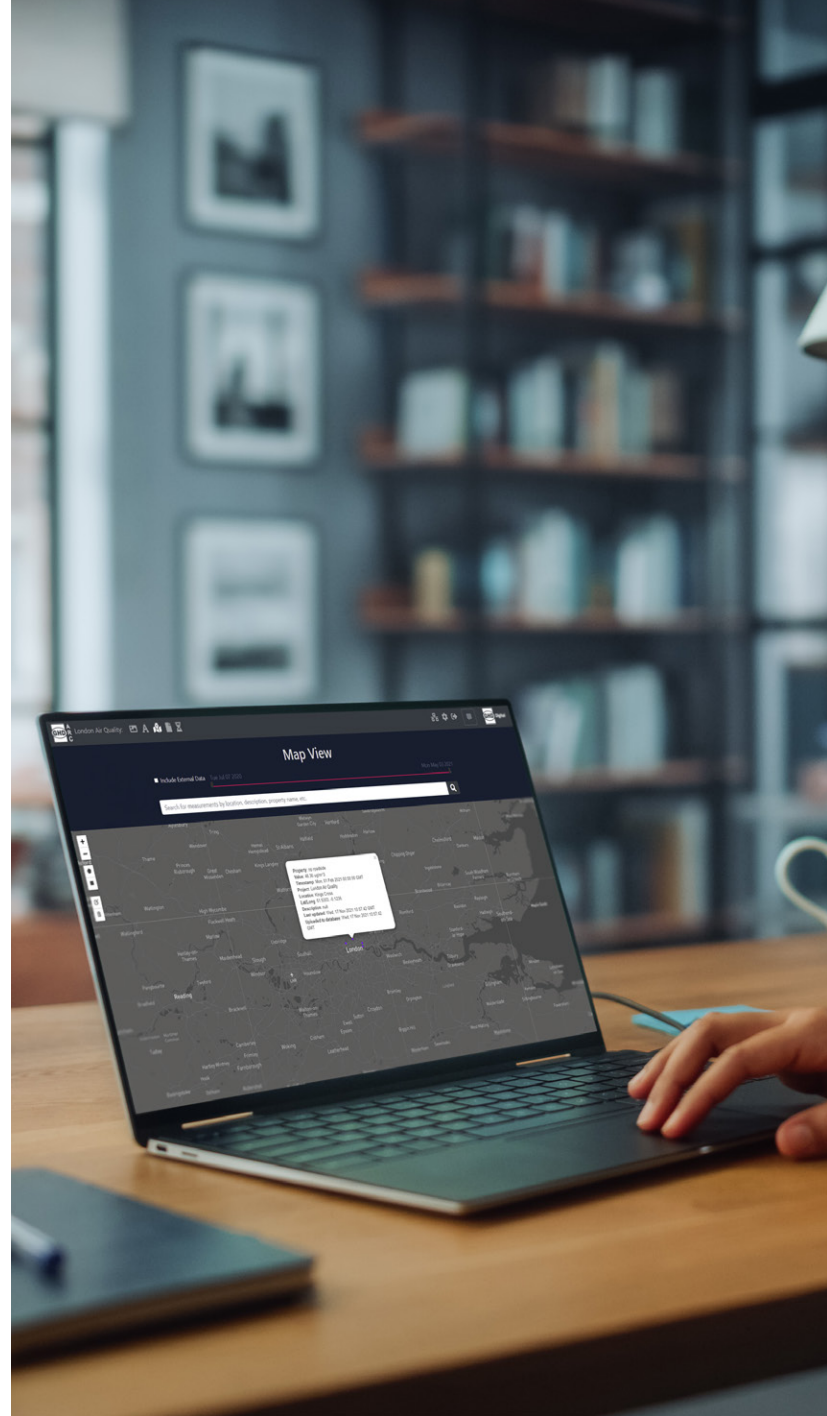

GHD Digital has created the Automated Report Creator (ARC), a cloud-based digital reporting solution. GHD ARC allows teams to generate fully featured reports with images and tables within seconds, with the click of a button. Now, you can experience a 95% or greater reduction in report creation and production time, ensuring your operations are more efficient and cost-effective.

No matter the industry or vertical, from environmental and social governance reporting, to embedded sensors optimizing construction processes, to ground water contamination reports, GHD ARC has you covered.

Platform highlights

1 Not only can you improve your existing reporting capabilities, GHD ARC enables complex outputs and report conditionality depending on available data. With additional versatility and quickly growing functionality, you can unlock new possibilities for your reporting.

2 GHD ARC streamlines your reports in minutes by automating the management of both reporting templates and data. With an overall reduction in effort by your internal teams, our automated tool can enable substantial cost savings.

3 Traditionally, disparate data storage locations and file types can complicate the reporting process. Now, you can ensure reliability and consistency between reports. Through built-in version control for templates, reporting errors and QA efforts are greatly reduced.

4 GHD ARC allows you to simplify your current processes. All requirements for high-frequency or time-consuming reporting on data-driven topics, such as sensor deployments or human-in-the-loop data capture, are facilitated within our platform.

Unlock new possibilities

GHD ARC features

01
Web accessibility

With secure login and SSO, GHD ARC users can easily login to our secure solution using their existing credentials. This means no additional credentials to remember, and GHD ARC feels integrated with your existing software.

02
Data flexibility

GHD ARC allows users to upload data from files or connect directly to databases. Your data stays where it is, meanwhile, GHD ARC quickly and easily generates reports. For file-based data, ARC offers a streamlined file-upload service to migrate your data to the cloud.

03
Ease of use

Now, you can generate reports from templates at the click of a button. Traditionally, compiling and checking these reports could take days or weeks of effort.

04
Custom filtering

You can now select time-range, locations or latitude and longitude to filter your data, creating enhanced flexibility and customization to help reach your goals.

05
Version control

GHD ARC enables version control for document templates, ensuring consistency between report versions and minimizing error.

06
Attribute inclusion

Through tables, plots and figures, images and more, ARC users can build the reports that suit their needs and customize the attributes to help improve their final report.

07
Scheduled reporting

GHD ARC enables automated report generation on a schedule or by API request, allowing complete integration into your business process to suit individual user needs.

08
Live data

Live dashboard functionality helps users quickly search data, ensuring reports being generated are using the latest data and allowing a quick view of inputs to your reports.
